Gentlemen:

Your Extension Vegetable Advisory Committee at the last meeting requested that the specialists prepare a reference list for agents to use in developing a Vegetable Library. We think it is a good idea.

The list we prepared is probably too extensive for most county agents. We attempted to include references in all basic and applied subjects related to the production, harvesting and handling of vegetables.*

The reference list is broken down in six categories:

A. Textbooks
B. Trade Journals and Magazines
C. Technical Journals
D. Reports (periodical)
E. Literature Sources
F. Miscellaneous

As nearly as could be determined references, within each category, are listed in the order of their importance to the worker in vegetables. The list is not perfect — as we probably forgot to list a few important ones and many of those listed may be substituted by other publications covering the same subject.

Much of the material listed is available at no cost to you. For the rest, sale price can be obtained from the publisher or from publications lists of each state and federal government.

* Listing of specific trade names of publications does not constitute endorsement over other publications in the same subject matter fields.
