LABORATORY METHODS IN PLANT MOLECULAR BIOLOGY

SYLLABUS

I. Course and Instructor Information.

Course: HOS4313C  
Section: 041B  
Credit Hours: 2  
Period 6-9: Tu & Th 1:30 - 4:30 pm  
Room: 184 CGRC  
Pre-requisites: AGR 3303 or PCB 3063 - Genetics, and  
HOS 3305 - Introduction to Plant Molecular Biology, or  
Permission from Instructor

Instructor: C. Eduardo Vallejos  
Office: 2243 Fifield Hall  
Phone: 273-4845  
e-mail: vallejos@ufl.edu (Subject must be “HOS4313C”)  
Office hours: M 1:00 - 2:00 pm, W 8:30 - 9:30 am, or by appointment

II. Course Description.

Molecular Biology is the branch of biology that studies the structure and function of macro molecules that encode and regulate the flow of genetic information used by living organisms. This course will provide students with hands-on experience in the most basic laboratory methods used to isolate, clone and analyze nucleic acid sequences. Through a balanced combination of lectures, direct experimentation, and preparation of lab reports students will learn how to use current bioinformatics resources to identify specific DNA sequences, design primers for PCR amplification of these sequences which will be cloned, and sequenced. Students will carry out a basic structural analysis of the cloned sequences and analyze some aspects of their pattern of expression. In addition, the class will carry out some plant transformation experiments.
III. Course Goals. This laboratory course aims to:
- Provide students with a thorough understanding of the physical-chemical and biological principles underlying the most basic techniques and procedures used in molecular biology.
- Foster the development of laboratory technique and organizational skills at the bench.
- Acquaint students with the exploration and utilization of bioinformatics resources.
- Help students develop critical thinking skills in the interpretation and reporting of scientific data.

IV. Learning Objectives. After taking this course students will be able to:
- Apply their knowledge of genome size to successfully detect specific sequences by DNA blot and/or PCR analysis, screen genomic libraries, or plan the sequencing of a genome.
- Extract high quality DNA and RNA from plant tissues.
- Use the various tools of the *Entrez* database to search and find specific DNA and protein sequences, and all the available information associated with those sequences.
- Design primers suitable for PCR amplification of specific DNA sequences.
- Clone DNA fragments into a suitable *Escherichia coli* host.
- Measure expression levels of specific sequences via RT-PCR analysis.
- Feel confident about using the most basic plant molecular methods under different circumstances and being able to troubleshoot problems that may arise.

V. Reading Material.

There is no textbook selected for this course. However, a laboratory manual will be provided by the instructor. Each unit in the manual has background information including some key citations, a list of reagents and solutions, and a detailed protocol for the experimental procedures. Copies of the supplemental material will be made available to the students in the form of a photocopy or an electronic file. Students are expected to read the pertinent sections of the manual before coming to class.

VII. Student Evaluation.

**Lab Preparation.** Students are expected to come to each lab session well prepared. This means they should have read the lab manual section pertaining to the scheduled activities. To demonstrate their preparation, they must arrive at the lab with two copies of a Flow Chart for the planned activities; one of these copies must be turned in at the beginning of the lab session. *This chart will be checked and graded.*

**Lab Reports.** Students will be required to turn in a Lab Report one week after the conclusion of each experiment. *Due dates will be announced in class.* **Part I** should be no more than a page long and **must** include:  
- *a)* the main objective of the experiment,  
- *b)* the most important findings,  
- *c)* the significance of the results, and  
- *d)* major conclusions. **Part II** should contain a brief summary of the results obtained in the lab. The format for this section will depend on the nature of the experimental results and may include one or more of the following: tables, diagrams, photos, and a description of the outcome of the experiment. In some cases, students will be asked to include results obtained by the entire class, and in others just those obtained by the group. **Part III** should include answers to the questions listed in the lab manual. Keep in mind that most of the experiments will be carried out over more than one lab session. For this reason, a report will not be required for every lab session, just after the completion of each experiment.

**IMPORTANT:** Sharing of Lab Reports among students is a violation of Academic Honesty. Reports that show extensive similarities will be rejected.

**Lab Technique.** This criterion relates to organizational skills, the ability to clean after yourself, avoid clutter on your bench, and your ability to work well with your lab partner and others in the lab.

**Mid-Term Exam.** Students will be tested on the principles of the techniques and procedures used in the previous lab sessions. Topics to be addressed in the exam will be clearly pointed out during lectures and lab sessions. Some questions in the exam will also be derived from the content of lab reports.

**Final Exam.** This exam will be comprehensive because the experiments in most of the lab sessions are interconnected making it difficult to separate the topics. However, emphasis will be placed on the topics covered after the Mid-Term.
Grade allowance.
Students will be allowed to remove one grade from the final computation for each of the first three evaluation criteria, with the exception of the last one in the semester.

Make-up exams.
Students who are unable to take scheduled exams in this course due to scheduling conflicts with other courses, or with religious holidays, should contact the instructor for alternate arrangements.

VIII. Lab Policies.

Attendance

Attendance is absolutely mandatory. “After due warning, professors can prohibit further attendance and subsequently assign a failing grade for excessive absences.” In general, acceptable reasons for absence from class include illness, serious family emergencies, special curricular requirements (e.g., judging trips, field trips, professional conferences), military obligation, severe weather conditions, religious holidays and court-imposed legal obligations (e.g., jury duty or subpoena). When appropriate, supporting documentation will be required.

A student may request a Verification of Visit form (ACL-012) which will display the date and time the student was seen at the SHCC. However, if an official Excuse Note is required, it must be requested as stated above.

"The Student Health Care Center will only write excuse notes for illnesses or injuries that have resulted, or will result, in absence of three or more days of class. Any shorter term absences will not receive notes. If an instructor requires a note for an absence of fewer than three days, one can be written upon the written request of the instructor." This request must be on official UF letterhead.

Laboratory Safety

Several rules and procedures must be followed during laboratory sessions to ensure the safety of people in the lab. The first of these is that food or beverages are not allowed in the lab. It is also recommended that students wear closed toe shoes. Handling certain chemicals, such as ethidium bromide, requires protective gloves. Disposable gloves will be provided in the lab. Students will be expected to keep their working area clean and uncluttered. CELL PHONES SHOULD BE TURNED OFF. Finally, one of the most important rules in this lab is that no
question will be considered dumb, so when in doubt, ask. This is particularly important if you
are going to operate some equipment or instrument and you are not completely sure of what you
are doing. You are here to learn. One way to do this is to ask questions.

Pre-Lab Preparation
Success in the lab depends to a great extent on advance preparation. For this reason,
students will be required to thoroughly read and understand the experimental procedures that will
be carried out during the lab session. To ensure that students have read the manual, they will be
required to bring to class a Flow Chart for the programmed activities. Any questions regarding
this pre-lab assignment should be brought to the attention of the Lab Instructor or the Teaching
Assistant.

IX. University Policies.

Academic Honesty
Every student has signed the following statement after completion of the registration form
at the University of Florida:
“\textit{I understand that the University of Florida expects its students to be honest in all their}
\textit{academic work. I agree to adhere to this commitment to academic honesty and}
\textit{understand that my failure to comply with this commitment may result in disciplinary}
\textit{action up to and including expulsion from the University.}”

Software Use
All faculty, staff and students of the University are required and expected to obey the
laws and legal agreements governing software use. Failure to do so can lead to monetary
damages and/or criminal penalties for the individual violator. Because such violations are also
against University policies and rules, disciplinary action will be taken as appropriate.

Students with Disabilities.
Students requesting classroom accommodation must first register with the Dean of
Students Office. The Dean of Students Office will provide documentation to the student who
must then provide this documentation to the Instructor when requesting accommodation.

X. Student Services.
The University and Gainesville Community offer a number of personal counseling
services for students at the University of Florida. Contact the appropriate agency listed below:

- Student Health Services
  Student Health Care Center (1 Fletcher Driver)
  Monday - Friday, 8:00am - 4:30pm
  \url{http://www.shcc.ufl.edu}
- University Counseling & Wellness Center 392-1575
  A counselor is available to assist students to work through personal issues.
P301 Peabody Hall
Monday - Friday, 8:00am - 5:00pm
http://www.counseling.ufl.edu/cwc/

- International Student Services 392-5323, ext. 600
  Assistance is provided for International students at the University.
123 Grinter Hall
Monday - Friday, 8:00am - 4:30pm
http://www.ufic.ufl.edu/iss.htm

- Career Development Assistance and Counseling 392-1601
  Career Resource Center M-F; 8:00am - 4:30pm
http://www.crc.ufl.edu

- Dean of Students Office, 392-1261
  A staff member is available to assist students.
P202 Peabody Hall
Monday - Friday, 8:00am - 4:30pm
